1 Executive Summary

Ghazal (غزل) is a premium wedding marketplace built for Kuwait, with a planned expansion across the GCC. It lets couples discover, compare and book wedding venues, then organise every remaining part of their wedding from a single application.

Today, booking a wedding venue in Kuwait means searching Instagram, exchanging WhatsApp messages, and phoning venues one by one to ask about a single date. Ghazal replaces that process with instant comparison, live availability and an online booking request backed by a deposit payment.

What this document covers

This document defines the product requirements for the Ghazal MVP across all four applications, the delivery timeline, and the third-party operating costs the platform owner will carry. Development fees, the payment schedule and maintenance rates are set out separately in the accompanying invoice.

4	2	2	3
Applications delivered	Months to launch	Languages — Arabic & English	Platforms — iOS, Android, Web

2 Product Vision

To become the Booking.com of wedding venues in Kuwait — the default place a couple starts when planning a wedding, and the default channel through which venues fill their calendar.

Ghazal is not only a booking engine. The venue booking is the entry point; the long-term value is the wedding planning layer around it — planners, vendors, budget tracking and checklists — which keeps the couple inside the platform for the full 6 to 18 months of wedding preparation.

The problem today

- Venue research is scattered across Instagram and WhatsApp
- No way to compare venues side by side
- Availability is unknown until someone answers the phone
- Prices are inconsistent and rarely published
- No single record of bookings, payments or agreements

The Ghazal answer

- One searchable catalogue of every venue in Kuwait
- Side-by-side comparison of up to 3 venues
- Live availability calendar per venue
- Transparent package pricing with seasonal rates
- Booking, deposit, invoice and chat in one place

3 Goals & Success Metrics

Goal	How the product delivers it	Success metric
Simplify venue booking	Search, compare and request a booking without leaving the app	Booking request completed in under 10 minutes
Reduce booking time	Live availability removes the phone-call loop	Days-to-confirmation reduced vs. manual process
Help couples compare	Three-venue comparison across price, capacity and amenities	Comparison used in a meaningful share of bookings
Increase venue bookings	Venue exposure, offers, flash sales and featured placement	Growth in confirmed bookings per venue per month
Digitalise wedding planning	Budget manager, checklist, countdown and vendor marketplace	Couples active in the app beyond the venue booking
Build the Kuwait wedding graph	Structured data on venues, areas, prices and demand	Coverage of the Kuwait venue market

4 Target Users

Primary users

- Bride
- Groom
- The bride's family
- Wedding planners

Venue partners

- Hotels
- Wedding halls
- Event venues
- Government wedding halls
- Luxury villas

Vendor categories (introduced after the MVP)

Photographers · Videographers · Florists · Decoration companies · Wedding dress shops · Makeup artists · DJs & MCs · Entertainment · Invitation designers · Catering · Luxury car rental · Wedding cakes · Honeymoon agencies

5 Platform Architecture

Ghazal is delivered as four front-end products sharing a single backend, database and media store. Every product is bilingual (Arabic RTL and English LTR).

01

Client Mobile App

iOS & Android

Discovery, comparison, booking, payment and the full wedding planning toolkit for couples.

02

Venue / Hotel Mobile App

iOS & Android

Lets a venue manager accept bookings, manage the calendar and reply to clients from a phone.

03

Venue Admin Dashboard

Web

The complete venue management system: pricing engine, staff roles, reports and marketing.

04

Super Admin Dashboard

Web

Platform ownership: approvals, commissions, subscriptions, finance, analytics and CMS.

Shared backend services

REST API · PostgreSQL · Redis cache · Object storage for media · Push notifications · WhatsApp OTP · Payment gateway · Real-time chat · Role-based access control · Audit logging

6 Client Mobile App — Requirements

The client app is the primary consumer product and the largest single build in the MVP.

6.1 Authentication

- Sign up and login
- Apple Sign-In
- Google Sign-In
- Phone OTP via WhatsApp
- Forgot password
- Biometric login
- Guest browsing without an account

6.2 Onboarding

- Introductory screens
- Wedding date
- Budget
- Guest count
- Preferred area
- Bride / groom profile
- Language: Arabic or English

6.3 Home screen

- Hero search by date, area, budget, guests
- Quick categories
- Featured venues
- Special offers
- Last-minute deals
- Available this week
- Trending venues
- Nearby venues
- Recommended for you

6.4 Search & filters

- Location and area
- Price and capacity
- Indoor / outdoor / mixed
- Parking, valet, bridal room
- Buffet and decoration included
- Photography allowed
- Women only / men only / mixed
- Availability and instant booking
- Rating, newest, luxury level, hotel brand

6.5 Venue card

- Photo and video
- Rating and review count
- Starting price
- Capacity and area
- Availability badge
- Favourite, compare and book actions

6.6 Venue details

- Large gallery and videos
- Description, amenities and rules
- Packages and capacity
- Google Maps location
- Bridal and groom rooms, decoration, buffet, lighting, stage, music
- Cancellation, children and dress-code policies
- Working hours
- Reviews, FAQ, availability calendar, similar venues

6.7 Comparison

- Compare up to 3 venues
- Price, guests, area, rating
- Buffet, parking, decoration
- Photos, packages, availability, distance
- Direct book action from the comparison view

6.8 Booking flow

- Choose date and time
- Choose package and extras
- Guest count
- Personal information and special requests
- Review and confirm
- Deposit payment
- Booking confirmation and invoice

6.9 Payment

- KNET
- Visa and Mastercard
- Apple Pay
- Google Pay
- Cash option where the venue allows it
- Deposit or full payment

6.10 Booking status

- Pending
- Approved
- Rejected
- Cancelled
- Completed
- Refunded

6.11 Wedding planner

- Offered after venue selection
- Silver, Gold and Royal packages
- Request a consultation
- Chat with the planner
- Schedule a meeting

6.12 Wedding services

- Photography and videography
- Flowers and cake
- DJ, MC, live music
- Henna and bridal makeup
- Wedding dress and suit rental
- Luxury cars and invitations
- Hotels, travel and honeymoon

6.13 Planning tools

- Wishlist for venues, services and packages
- Budget manager with categories and alerts
- Wedding checklist with completion percentage
- Wedding countdown milestones

6.14 Chat

- Venue chat
- Planner chat
- Vendor chat
- Support chat
- Media, documents and voice messages

6.15 Notifications

- Booking updates
- Offers and price drops
- New venues
- Messages and payments
- Reminders before the wedding

6.16 Reviews & profile

- Reviews with photos, videos and ratings
- Owner replies
- Loyalty points, coupons and referral rewards
- Personal and wedding information
- Saved venues, bookings, payments
- Language and settings
- Account deletion

7 Venue / Hotel Mobile App — Requirements

Purpose: let a venue manage its bookings without opening a laptop.

7.1 Dashboard

- Today's bookings
- Revenue
- Pending requests
- Notifications
- Messages
- Availability

7.2 Bookings

- Accept
- Reject
- Reschedule
- Call client
- Chat
- Invoice

7.3 Calendar

- Monthly, weekly and daily views
- Blocked dates
- Available dates

7.4 Venue management

- Photos and videos
- Packages and prices
- Capacity and amenities
- Policies
- Offers
- Availability

7.5 Offers

- Create offer
- Flash sale
- Discount
- Coupon

7.6 Analytics

- Views and clicks
- Bookings and revenue
- Conversion rate
- Top packages

7.7 Notifications

- New booking
- Cancelled booking
- Payment received
- New reviews

7.8 Settings

- Staff
- Bank information
- Business hours
- Languages

8 Venue Admin Dashboard (Web) — Requirements

Purpose: the complete management system a venue operates day to day.

8.1 Dashboard

- Revenue and bookings
- Today's events
- Occupancy rate
- Pending bookings
- Average rating
- Top packages

8.2 Booking management

- Approve, reject, reschedule
- Invoice and refund
- Payment status
- Export

8.3 Calendar management

- Drag and drop
- Block dates
- Season pricing
- Peak pricing
- Special events

8.4 Venue management

- Gallery and videos
- 360° tour placeholder
- Amenities and description
- Packages and menus
- Rules and FAQs

8.5 Pricing engine

- Weekend and weekday pricing
- Holiday and season pricing
- Coupons
- Discounts
- Promotions

8.6 Customer management

- Clients and history
- Upcoming weddings
- VIP clients
- Blacklist

8.7 Staff & roles

- Roles and permissions
- Reception
- Manager
- Accountant
- Marketing

8.8 Reports

- Revenue
- Bookings
- Occupancy
- Payments
- Taxes
- Exports

8.9 Reviews & marketing

- Approve and reply to reviews
- Report abuse
- Push notifications, WhatsApp and email
- Coupons and campaigns

9 Super Admin Dashboard — Requirements

Purpose: the platform owner's control centre over every venue, vendor, user and dinar moving through Ghazal.

9.1 Platform dashboard

- Total revenue and bookings
- Total venues and users
- Wedding planners and vendors
- Growth charts

9.2 Approvals

- Approve, reject or suspend a venue
- Verify documents
- Approve, reject or suspend a vendor
- Vendor categories

9.3 Users

- Clients
- Hotels
- Wedding planners
- Admins
- Support agents

9.4 Commission management

- Commission percentage
- Per venue and per category
- Revenue sharing
- Settlement
- Payout

9.5 Subscriptions

- Free
- Premium
- Featured
- Sponsored

9.6 Content & CMS

- Homepage and banners
- Offers and blogs
- FAQs, terms and privacy
- Landing pages, about and contact

9.7 Categories & areas

- Hotels, wedding halls, outdoor
- Beach, luxury, government
- All Kuwait areas
- GCC areas in a later phase

9.8 Wedding planners

- Packages and pricing
- Availability
- Assignments

9.9 Support

- Tickets
- Live chat
- Complaints
- Refunds

9.10 Notification centre

- Push
- Email
- WhatsApp

9.11 Finance

- Transactions and invoices
- Refunds and taxes
- Commissions
- Profit

9.12 Analytics & security

- Users, retention, revenue, conversion
- Most searched areas and top venues
- Cancellation rate and peak booking months
- Admin roles and permissions
- Activity and audit logs
- Two-factor authentication
- IP restrictions

10 Design System & UI/UX Direction

The visual direction is luxury, minimal and elegant — closer to a five-star hotel brand than to a classified-ads app. Large imagery, generous whitespace, rounded cards and a restrained gold accent.

Colour palette

Soft Rose	Warm Off White	Matte Gold	Dark Rose Gray
#F8E7EC	#FFF9F5	#D8B26E	#5A4B4F
Primary surface	Background	Accent & actions	Text & headings

Typography

Language	Typeface	Usage
Arabic	Cairo	All Arabic interface text, right-to-left layout
English	Poppins	All English interface text, left-to-right layout

Design principles

Luxury hotel feel | Minimal cards | Rounded corners | Large images | Generous whitespace | Full RTL mirroring | Accessible contrast | Consistent component library

11 Technology Stack

Layer	Technology	Notes
Mobile apps	Flutter	Single codebase for iOS and Android across both apps
Web dashboards	React	Venue admin dashboard and super admin dashboard
Backend API	NestJS or Laravel	REST API, role-based access control, audit logging
Database	PostgreSQL	Primary relational store
Cache & queues	Redis	Sessions, caching, background jobs
Media storage	Google Cloud Storage	Venue photos and videos with CDN delivery
Hosting	Google Cloud Platform	Cloud Run, Cloud SQL, Cloud Storage
Notifications	Firebase Cloud Messaging	Push notifications to both apps
Authentication	Backend JWT + OAuth	WhatsApp OTP, Apple Sign-In, Google Sign-In
Payments	KNET via MyFatoorah	Plus Visa, Mastercard, Apple Pay, Google Pay
Maps	Google Maps Platform	Venue location, distance and nearby search

12 Non-Functional Requirements

Area	Requirement
Localisation	Full Arabic (RTL) and English (LTR) support across all four products, including mirrored layouts, dates and numbers
Performance	Home and search screens load within 2 seconds on a normal 4G connection
Availability	Managed cloud hosting with automated daily database backups

Area	Requirement
Security	Encrypted transport, hashed credentials, role-based access control, two-factor authentication for admin accounts, audit logs
Payments	No card data stored on the platform; all card handling delegated to the certified payment gateway
Privacy	Account deletion from within the client app, as required by Apple and Google
Scalability	Stateless API services that scale horizontally as traffic grows
Compatibility	iOS 14 and above, Android 8 and above, current versions of Chrome, Safari and Edge
Analytics	Event tracking on search, venue view, comparison, booking and payment

13 Monetization & Revenue Streams

Monetization mechanisms

- Venue subscription plans
- Featured listings
- Commission per booking
- In-app advertising
- Wedding planner packages
- Vendor subscriptions
- Sponsored search results
- Premium analytics for venues

Revenue streams

- Booking commission
- Recurring subscriptions
- Advertising
- Lead generation
- Wedding planning services
- Vendor marketplace
- Premium membership

The commission engine, subscription tiers and featured placement are all built into the MVP super admin dashboard, so the platform can begin earning from the first confirmed booking.

14 Product Roadmap

The MVP delivered under this agreement is Phase 1 in full, plus the planning tools and chat that make the product sticky. Phases 3 and 4 are outside this scope and are quoted separately when the platform is ready for them.

Phase 1

Included in this MVP

- Venue discovery
- Booking
- Comparison
- Payments

Phase 2

Included in this MVP

- Wedding services marketplace
- Wedding planner
- Chat
- Reviews

Phase 3

Future scope

- AI wedding assistant
- AI budget planner
- Smart timeline
- Smart checklist

Phase 4

Future scope

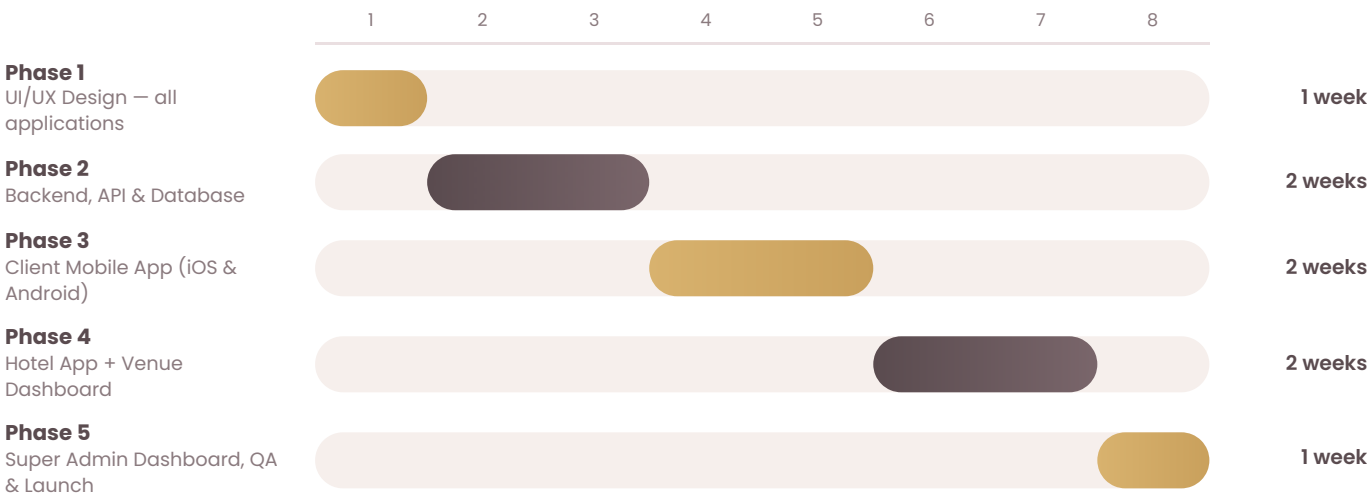

- UAE
- Saudi Arabia
- Qatar
- Bahrain
- Oman

Explicitly deferred features

360° virtual tours | Payment installments | AI demand prediction | Revenue forecasting | Fraud detection | Dynamic pricing suggestions | GCC market expansion

15 Project Timeline

The project runs in five sequential phases over 8 weeks — two months — from the signing date. The timeline is intentionally high level: each phase is delivered as a working, reviewable milestone rather than a long list of dated tasks.

Phase	Scope	Duration
Phase 1	UI/UX design for the client app, the hotel app and dashboard, and the super admin app — screen designs in Arabic and English	1 week
Phase 2	Backend, database and REST API for all four applications	2 weeks
Phase 3	Client mobile app for iOS and Android	2 weeks
Phase 4	Hotel mobile app and the venue web dashboard	2 weeks
Phase 5	Super admin dashboard, quality assurance, deployment to Google Cloud, and submission to the App Store and Google Play	1 week
Total	**From signing to published applications**	**8 weeks**

ⓘ Design work in Phase 1 is approved before development begins. The two-month schedule assumes review feedback is returned within two business days at each milestone, and that branding, legal texts and venue content are supplied at kick-off.

16 Third-Party & Operating Costs

These are the running costs of owning the platform. They are paid by the platform owner directly to each provider, using accounts registered in the owner's name. They are separate from the development fee, which is set out in the accompanying invoice.

Item	Provider	Billing	Estimated cost
Google Cloud Cloud Run, Cloud SQL, Cloud Storage, CDN and Maps Platform	Google Cloud	Monthly	**$20 – $100 / month**
Apple Developer Program Required to publish on the App Store	Apple	Annual	**$99 per year**
Google Play Developer Account Required to publish on Google Play	Google	One-time	**$25 once**
Domain name	Registrar	Annual	**$12 – $20 per year**
Payment gateway KNET, cards, Apple Pay, Google Pay	MyFatoorah	Setup + per transaction	**Provider rate**
Recurring monthly cost			**$20 – $100 / month**

ⓘ Cloud spend runs between $20 and $100 per month depending on the number of active users, and covers hosting, the database, media storage, CDN and maps. OTP codes and notifications are delivered over WhatsApp, so there is no SMS gateway subscription. The Apple, Google Play and domain fees are annual or one-time and sit outside the monthly figure; payment gateway fees are charged as a percentage of each booking.

Accounts registered in the owner's name

The Apple, Google Play, Google Cloud and payment gateway accounts are created under the platform owner's identity and payment method. This keeps full ownership of the apps, the data and the revenue with the owner from day one.

17 Assumptions, Exclusions & Terms

Assumptions

- The MVP scope is exactly what is described in sections 6 to 9 of this document
- The platform owner provides branding assets and the logo
- The platform owner provides the legal texts: terms of use and privacy policy
- The platform owner provides the initial venue content and data
- Apple, Google Play, Google Cloud and payment gateway accounts are opened by the owner
- Review feedback is returned within two business days at each milestone
- Two rounds of design revision per screen set are included

Exclusions

- Features marked as future scope in section 14
- Content creation, photography and copywriting
- Marketing, advertising and app store optimisation
- Third-party subscriptions and cloud charges listed in section 16
- Venue onboarding and data entry
- Legal, accounting and company registration services

Terms

- Development fees, the payment schedule and maintenance rates are set out in the accompanying invoice, which covers exactly the scope defined in this document
- Full ownership of the source code transfers to the platform owner on final payment
- All work is delivered to the owner's own cloud and store accounts
- Changes to scope are quoted separately before being carried out
- The free maintenance period begins on the day the apps are live on both stores

18 Deliverables

What is delivered

- Complete UI/UX design files for all four applications, in Arabic and English
- Hotel / venue mobile app — published on the App Store and Google Play
- Super admin dashboard — deployed and live on the web
- Full source code for every product, transferred to the owner
- Handover and training session for the admin team
- Client mobile app — published on the App Store and Google Play
- Venue admin dashboard — deployed and live on the web
- Backend API, database schema and admin documentation
- Deployment on the owner's Google Cloud account
- Two months of free maintenance from launch day

Development fees, the payment schedule, maintenance rates and the budget for new features are set out in the accompanying invoice. The third-party operating costs in section 16 are paid by the platform owner directly to each provider.
